Specialty education for psychiatry trainee

Focused on delivering knowledge and skills for contemporary psychiatric practice, our Graduate Certificate, Graduate Diploma and Masters courses provide a person-centred, recovery-oriented approach to improving mental health and wellbeing of people in a range of clinical contexts.

Informed by research and practice with input from academics, clinical experts, consumers and carers, the Health Education and Training Institute (HETI) offers a world class program of study in Psychiatric Medicine, with flexible learning options to prepare you for your College exams and beyond.

The program integrates a recovery-orientation and biopsychosocial understanding of psychiatry with the CanMEDS competencies. This ensures that, as psychiatrists, your practice will be aligned with the latest professional, consumer and carer perspectives on how to most effectively assist people with mental illness to live full and satisfying lives.

Formal Education Courses (FEC) and Masters Program

Accredited with the Royal Australian and New Zealand College of Psychiatrists (RANZCP) as Formal Education Courses, our Graduate Certificate, Graduate Diploma and Masters courses in psychiatry are designed and delivered in line with College syllabus requirements for Stage 1 and Stage 2 trainees. RANZCP students can elect to complete their studies through a postgraduate degree, or non-degree pathway.

All study pathways include:

- Flexible participation modes.
- Expert seminars, workshops and tutorials.
- Participation in online activities.
- Detailed feedback on course assessments to enhance studies, professional progression and College assessment preparation.

Flexible access to study

Students can elect to learn at our campus in North Parramatta, through live web-video conferencing, or delayed online participation – or a combination of these.

Interprofessional Collaboration

Psychiatry trainees have the opportunity to enhance their ability to work interprofessionally through studying side-by-side with GPs, Rural and Remote specialists and other medical practitioners. Students completing the Masters research units, aligned with RANZCP Scholarly Project development needs, will also study alongside a broader range of health professionals.

New in 2018

To better equip students to prepare for RANZCP assessments HETI has introduced a new stream of weekly activities, commencing with Stage One trainees. This program supplements your education with attention to the special requirements needed for this important work transition. Activities include:

- Preparing for work based assessments and examinations.
- Preparing for and approaching multiple choice questions for success.
- Applying critical appraisal skills to examinations.
- Looking after yourself through the training process.
- Making the most of working with your supervisor and colleague.

YEAR 1 GRADUATE CERTIFICATE
